

In each person's life, some objects feel special and have a greater meaning regardless of their actual value. These can be photographs, souvenirs from a trip, postcards, given gifts, scents from candles - objects of memories...

Shine sentimental shelving system creates spaces for these objects. With the system being divided into smaller shelves it creates space for each object to stand out based on its hierarchy of importance. Therefore, each shelf can create its own story.

The modular system is designed so that shelves can be exchanged and replaced as objects change. Shelves are divided into functional and sentimental ones. Based on the selection of desired shelves the function of the shelving system is created.
